Enforcement Action - Tidewater Baling
Newark, Essex County, New Jersey

Richard C. Salkie, Associate director for
Removal and Emergency Preparedness Programs

George Pavlou, Associate Director for
Enforcement Programs

The New Jersey Department of Environmental Protection (NJDEP) has requested that we make an assessment to determine if a removal action is warranted at the Tidewater Baling site, St. Charles Street, Newark, New Jersey. The facility was engaged in, and does, recycling of metals. The NJDEP has documented releases of hazardous wastes into the environment, putting at risk people who use a neighboring recreational area. The NJDEP has also issued administrative orders against the facility to cease the releases and remediate the past contamination. To date, the facility has not complied with these orders.

The initial assessment of this site indicated that it is removal eligible, and as such, I request that an individual be assigned to initiate enforcement action against the facility. Because of the history of this site and its location, I believe we should consider use of the new expedited process of issuing a Notice and Order to the facility.

The OSC assigned to this site is John Witkowski, who can be contacted at FTS 340-6739.
